GnuPG VS-Desktop - Version 3.4.1 (en)

g10 Code GmbH

2026-11-20

GnuPG VS-Desktop® version 3.4.1.0 has been available since 2026-11-20. This version contains an important security update for GnuPG. The previous version was 3.4.0.

Notes to Admins

An immediate update to this version is highly suggested. This is an security update because of CVE-2026-129975.

By using an OpenPGP key containing a crafted very long user id, it is possible to trigger a double free. This double free can be used to exfiltrate data from the application. Exploiting this bug to mount an Remote Code Execution attack (RCE) can't be ruled out.

Solved Bugs

Engine (GnuPG)

- `gpgme`: Fix a double free in the status line read code. CVE-2026-129975. (T8557)

Known Issues

The included version 2.7.6 of the GpgOL Outlook add-in causes a noticeable slowdown when switching between mails. This is particularly relevant for mails that are not cached.

Versions of the Components

Komponente	Version	Anmerkungen
GnuPG	2.2.57	T8572
Kleopatra	3.4.0
